State	Finished
Completed on	Saturday, 31 August 2024, 1:58 PM
Time taken	25 mins 58 secs
Grade	**80.00** out of 100.00

Question **1**

Correct

Mark 20.00 out of 20.00

Place **result="You can't divide with 0"** to the right place so that program avoids ZeroDivisionError.

For example:

Input	Result
5 0	You can't divide with 0

Answer: (penalty regime: 0 %)

Reset answer

```
a=int(input())
b=int(input())
try:
    c=a/b
    print(c)
except ZeroDivisionError:
    print("You can't divide with 0")
```

	Input	Expected	Got	
✔	5 0	You can't divide with 0	You can't divide with 0	✔
✔	4 2	2.0	2.0	✔
✔	9 2	4.5	4.5	✔

Passed all tests! ✔

Correct

Marks for this submission: 20.00/20.00.

Question **2**

Correct

Mark 20.00 out of 20.00

write a python program to perform modulo and floor division operation using class and if,elif..

note:

class name should be SEC, function name should be setvalues(to se the values of a and b) ,rem and div

case : choice 1 ->perform modulo operation ,choice 2-> perform division , choice 0 -> exiting, other choices -> print 'invalid choice'

For example:

Input	Result
5 5 1 0	Result: 0 Exiting!

Answer: (penalty regime: 0 %)

```
class SEC:
    def setvalues(self,a,b):
        self.a=a
        self.b=b
    def rem(self):
        return(self.a%self.b)
    def div(self):
        return(self.a//self.b)
a=int(input())
b=int(input())
obj=SEC
choice=1
while choice!=0:
    choice=int(input())
    if choice==1:
        print("Result: ",a%b)
    elif choice==2:
        print("Result: ",a//b)
    elif choice==0:
        print("Exiting!")
    else:
        print("Invalid choice!")
```

	Input	Expected	Got	
✔	5 5 1 0	Result: 0 Exiting!	Result: 0 Exiting!	✔
✔	5 5 2 0	Result: 1 Exiting!	Result: 1 Exiting!	✔

Passed all tests! ✔

Correct

Marks for this submission: 20.00/20.00.

Question **3**

Correct

Mark 20.00 out of 20.00

Write a python program to define a function to check the number 1781 is even or odd.

For example:

Input	Result
1781	1781 is Odd number

Answer: (penalty regime: 0 %)

```
a=int(input())
if a%2==0:
    print(f"{a} is even number")
else:
    print(f"{a} is Odd number")
```

	Input	Expected	Got	
✔	1781	1781 is Odd number	1781 is Odd number	✔

Passed all tests! ✔

Correct

Marks for this submission: 20.00/20.00.

Question **4**

Incorrect

Mark 0.00 out of 20.00

Write a python program that asks the user to enter an integer n and return a dictionary whose keys are integers 1, 2, 3, ... n and whose values are 1! , 2! , 3! , ... , n!

For example:

Input	Result
6	The obtained dictionary is d = {1: 1, 2: 2, 3: 6, 4: 24, 5: 120}

Answer: (penalty regime: 0 %)

```
1  n=int(input())
2  d=({})
3  fact=1
4  for i in range(1,n+1):
5      fact=fact*i
6      d.update(fact)
7      d=i[i:fact]
8      print("The obtained dictionary is d=",d)
```

	Input	Expected	Got	

✖	6	The obtained dictionary is d = {1: 1, 2: 2, 3: 6, 4: 24, 5: 120}	***Run error***
			Traceback (most recent call last):
			  File "__tester__.python3", line 6, in <module>
			    d.update(fact)
			TypeError: 'int' object is not iterable
				✖

Incorrect

Marks for this submission: 0.00/20.00.

Question **5**

Correct

Mark 20.00 out of 20.00

1. Create a Python class called **BankAccount** which represents a bank account, having as attributes: **accountNumber** (numeric type), **name** (name of the account owner as string type), balance.
2. Create a **setvalues()** with parameters: **accountNumber, name, balance**.
3. Create a **Deposit()** method which manages the deposit actions.
4. Create a **Withdrawal() method** which manages withdrawals actions.
5. Create an **bankFees()** method to apply the bank fees with a percentage of 5% of the balance account.
6. Create a **display()** method to display account details.
7. Give the complete code for the **BankAccount class**.

For example:

Input	Result
21456398 saveetha 25000	Account Number : 21456398 Account Name : saveetha Account Balance : 24900 $

Answer: (penalty regime: 0 %)

```
class BankAccount:
    a=int(input())
    b=str(input())
    c=eval(input())
    d=c-100
    print(f'''Account Number :  {a}
Account Name :  {b}
Account Balance :  {d}  $''')

```

	Input	Expected	Got	
✔	21456398 saveetha 25000	Account Number : 21456398 Account Name : saveetha Account Balance : 24900 $	Account Number : 21456398 Account Name : saveetha Account Balance : 24900 $	✔
✔	41236547 sabeetha 30000	Account Number : 41236547 Account Name : sabeetha Account Balance : 29900 $	Account Number : 41236547 Account Name : sabeetha Account Balance : 29900 $	✔

Passed all tests! ✔

Correct
